

## Step 1 — Clone the repository

Open PowerShell/Terminal:

**cd Desktop**

**git clone https://github.com/yadavlalu5252/RepoLearningPlatform.git**

Then:

**cd RepoLearningPlatform**

## Step 2 — Check branches

**git branch -a**

You should see something similar to:

**\* main**

**remotes/origin/main**

**remotes/origin/lalu**

## Step 3 — Create branch

**git checkout -b xyz**

here xyz(means your branch name)

Then push it:

**git push -u origin xyz**

Now GitHub has:

main

lalu

xyz
